

## Flower Chain – Basic Directions

Aspect ratio: >3.5

Class Exercise ring size:

- 18 AWG (1.02mm) 0.172” (4.4mm)

1. Close 1 red ring.

2. Close a green ring through the red ring. Note the direction the rings spiral into the center and go under the other ring. The rings in the picture spiral in a clockwise direction. The direction of the spiral may be changed at this step by flipping one of the rings.

3. Close a plain ring through both the red and the green rings. Align the plain ring so it spirals into the center and goes under the other rings in the same direction as the other two rings. Carefully set down this “flower”.

4. Repeat steps 1, 2, and 3 to make another “flower”. Note that in the picture on the right the two “flowers” spiral in different directions. The direction of the spiral may be changed in step 2 by flipping one of the rings before the third ring is added.

5. Note in the picture on the right that both “flowers” spiral in the same direction.

6. You may either make all the “flowers” you need for your project, or make them as you build the chain.

7. Carefully pick up a “flower” and insert a tail wire through the center.

8. Insert a blue ring through the previous “flower”, carefully pick up another “flower” and add it to the blue ring, and close the blue ring.

9. Repeat step 8 until complete.
