

## Fouever Chain – Basic Directions

Aspect ratio: 4.6

Class exercise ring size:

- 16 AWG (1.29mm) 0.234" (6.0mm)

1. Close two jump rings. Open a jump ring, pass it through the pair of closed rings, and close it. Open another jump ring, pass it through the first pair of rings parallel to the third ring, and close it. Arrange the two pairs of rings in the direction you want them to spiral.

2. Open a jump ring, pass it through both pairs of closed rings from the previous step, and close it. Open another jump ring, pass it through the both pairs of rings parallel to the fifth ring, and close it. Arrange the three pairs of rings so they all spiral in the same direction.

3. Open a jump ring, pass it through all three pairs of closed rings from the previous step, and close it. Open another jump ring, pass it through all three pairs of rings parallel to the seventh ring, and close it. This is known as a knot.

4. Open a jump ring, pass it through one of the pairs of rings in the knot, and close it. Add a tail wire. This is the start of the chain.

5. Make another knot using steps 1 through 3. Open a jump ring, pass it through one of the pairs of rings in the new knot and also through a pair of rings in the previous knot (any pair except the one containing the previous connecting ring), and close it.

6. Repeat the previous step until complete.
